

AprilAire®

Radon

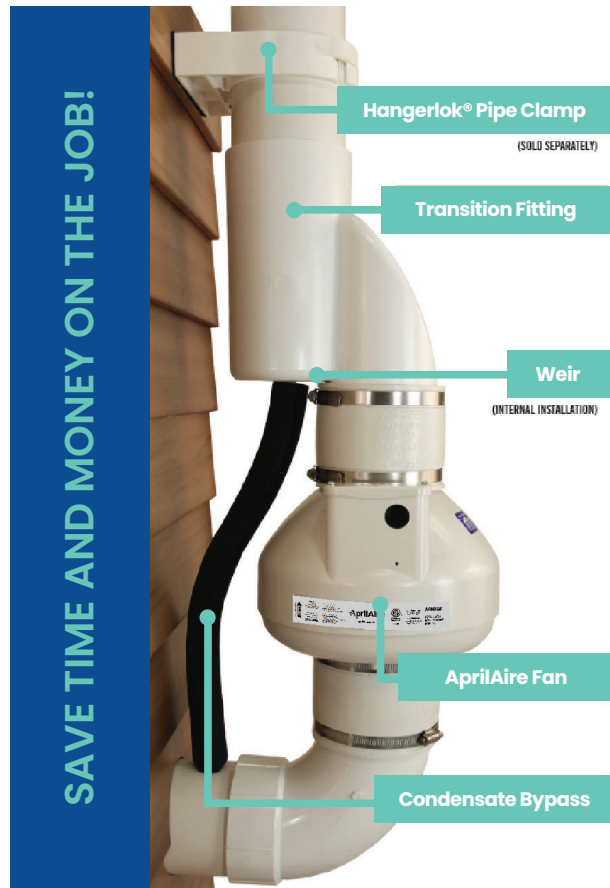

Transition Fitting

ARNTF4

SYSTEM UPGRADE FROM APRILAIRE

AprilAire Radon Transition Fitting (**P/N ARNTF4**) is molded from UV-resistant white PVC and creates a sleeker, more attractive system installation. It can be used with our fan covers or as a stand-alone fitting, replacing 2 to 5 fittings and primer/glue. When used with the AprilAire Condensate Bypass Kit (below), the molded internal slot perfectly fits the condensate weir.

FEATURES

- Replaces 2-5 fittings (depending on configuration)
- UV-resistant white schedule 40 PVC
- Connects to 4" spigot x 4" socket
- Provides an internal slot for weir (included in AprilAire's Condensate Bypass Kit)
- Replaces transition box for a time-saving, cleaner look
- Easily converts to 3" with PVC offset bushing
- Can be used in conjunction with AprilAire Fan Covers/Kits or as a stand-alone fitting

Not ASME/ANSI Approved

CONDENSATE BYPASS KIT

Installing a condensate bypass (**P/N ARNCBK**) on an exterior ASD system further reduces potential moisture damage by bypassing the flow of exhaust pipe condensation. When paired with our transition fitting, it enhances system performance.

- 3' of Tubing & Tubing Insulation
- 2 Barbed Fittings
- Condensate Weir
